

Kyl Center Shortage Impacts Tool

Section: Shortage Impacts Tool

Source: <https://azwaterblueprint.asu.edu/colorado-river-shortage>

In 2021, for the first time since the signing of the Colorado Compact in 1922, a Colorado River water shortage was declared. As a result, the amount of water Arizona can take from the Colorado River has been reduced. On this page, you will find Kyl Center resources that explain and contextualize the Colorado River shortage and its impact on Arizona.

Central Arizona Colorado River Shortage Impact Analysis Tool

Colorado River Shortage: What it Means and What Comes Next

The Kyl Center for Water Policy at Morrison Institute is creating the Arizona Colorado River Visualization Enterprise. The "Arizona CuRVE Project" aims to model the impacts to Arizona of Colorado River climate, hydrologic, and management scenarios.

The first component of the Arizona CuRVE Project is a Story Map that aims to help people understand and explain the Colorado River shortage. It examines what the shortage means for water conservation, residential water users, groundwater pumping, utility costs, urban growth, new water supplies, and water rights. This Story Map provides a detailed analysis of the shortage and offers interactive maps to help explain which communities face the most significant impacts as a result of the drought and the Colorado River's over-allocation.

Colorado River: Central Arizona Entitlements and Access Tool

Most of the pain of Colorado River shortages will fall on those who are using the water, rather than on those who are entitled to it. Understanding this nuance may help water managers discover additional, innovative ways to lease, trade, and exchange water to mitigate shortage impacts.

This web tool visualizes Central Arizona contract entitlements to Colorado River water and also takes into account long-term leases and exchanges, showing who has access to that water.

Being clear about those entitled to water and those who actually have access to use it can help water policy leaders better frame complex Colorado River shortage issues, which will aid the general public's understanding of how their communities might be impacted.

Section: Sponsors of the Arizona Water Blueprint

About the Project

ASU's Kyl Center for Water Policy, part of the Morrison Institute for Public Policy, held design workshops with over 200 experts in water, land use, environmental and economic development. Input from these experts helped us to create the Arizona Water Blueprint.

The Arizona Water Blueprint is a data-rich, interactive map of Arizona's water resources and infrastructure. Offering data visualizations and in-depth multimedia content on important water-related topics, the Water Blueprint is a tool for holistic thinking to inform policy decisions and good water stewardship.

Sponsors

The Kyl Center for Water Policy at Morrison Institute is dedicated to seeking water solutions. The Kyl Center's work is made possible by the generosity of institutional and individual donors. Learn more about supporting the Kyl Center with a financial contribution.

SRP

As a community-based not-for-profit water and energy company, SRP provides water and power to more than 2 million people living in central Arizona. SRP has provided these essential resources for more than a century.

Tucson Water

Tucson Water is part of the City of Tucson, Arizona, government and serves more than 731,000 residential, commercial and industrial customers.

City of Phoenix

For over 100 years, Phoenix Water has delivered safe and clean drinking water to Phoenix residents. Today, Phoenix Water provides water to more than 1.5 million customers.

APS

Arizona Public Service generates energy for 2.7 million Arizonans. The company's service territory stretches across the state, from the border town of Douglas to the vistas of the Grand Canyon, from the solar fields of Gila Bend to the ponderosa pines of Payson.

Central Arizona Project

In the early 20th century, Arizona's leaders knew the state's future depended on a water supply that was secure, stable and renewable. They pursued that vision; the result was Central Arizona Project (CAP), a 336-mile system that brings Colorado River water to central and southern Arizona, delivers the state's single largest renewable water supply and serves 80% of the state's population.

Contact the Blueprint Administrators

The Arizona Water Blueprint was designed and is maintained by the Kyl Center for Water Policy, a part of the ASU Morrison Institute for Public Policy.

Special Thanks

The Kyl Center for Water Policy at Morrison Institute is particularly thankful for the work of two ASU graduate students studying geographic information systems, Jacob Perez and Nick Carroll. Both brought the skill and dedication needed to make the Blueprint what it is today.
